

RFT PANEL FINISHES

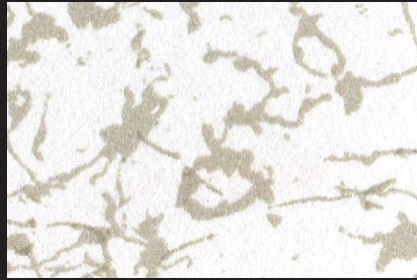

Antistatic High Pressure Laminate

RFT High Pressure Laminate (HPL) is ideal in areas of high foot traffic where the build-up of electrostatic charges is anticipated. Less prone to wear and tear and indentation, HPL finishes offer the user minimal maintenance, ease of

use, and durability. HPL finishes are ideal for use in staffed computer and control rooms. The range of colours allows for use in all technical rooms, as well as corporate office and conference rooms.
